

**RECEIVED  
CENTRAL FAX CENTER****NOV 9 - 2007****Amendments to Specification**

Please amend the specification as follows:

a. In the Summary section, please delete the paragraph beginning at page 4, line 12, and ending on page 5, line 2, which reads "A key for adjusting a compression anchor ... containing the first and third portions of the handle."

b. In the Summary of Drawings section, please add the following paragraph after page 5, line 17:

"Figure 9 shows a cross-section of the body shown in Figure 8."

and please add the following paragraph after page 6, line 10:

"Figure 21 shows a side view of the anchor and the support member shown in Figure 20."

c. Please replace the paragraph beginning on page 9, line 15 with the following paragraph:

Figure 6 shows a top view of the anchor body 1, without the wedge portion (2 in Figure 1). As shown, the body 1 includes an upper side 9 of the rim 8. The rim 8 also includes an inner sidewall 15 and an inner horizontal surface 13. Threads 14 are used to engage the wedge portion (2 in Figure 1).

d. Please replace the paragraph beginning on page 14, line 18 with the following paragraph:

Figure 18 shows a perspective view of another embodiment of the anchor 10 with an anti-rotation tab 50 positioned approximately midway along the length of the body 1. In use, the anchor 10 is embedded into a ground surface, or other surface, for example by pouring concrete or other foundation substrate around the anchor 10. To move the wedge portion 2 relative to the body 1, a user exerts a torsional force about a longitudinal axis of the anchor 10 using a key (not shown). The anti-rotation tab 50 is a flange that extends outward from the anchor body 1. Anti-rotation tab 50 prevents the anchor 10 from rotating relative to the ground, or other

surface, in response to the torsional force. In the example of Figure 18, the grounding screw 5 is connected to the anti-rotation tab. Also in this example, the bottom plate (not shown in Figure 18) is round and does not extend beyond the walls of the body 1.

- e. Please **replace** the paragraph beginning on page 15, line 14 with the following paragraph:

Figure 22 shows a top view of the anchor 10 and support member 100 shown in Figures 20 and ~~[[22]]~~ 21. As shown in Figure 22, the support member 100 fits snugly in the anchor 10.

- f. Please **replace** the paragraph beginning on page 17, line 3 with the following paragraph:

The handle 202 in the example of Figure 26 is bent in the embodiment of Figure 26. The handle 202 includes a first flat portion 210, a second flat portion 212 that forms a 30-degree angle with respect to the first flat portion 210, and a third flat portion 214 parallel to the first flat portion ~~[[212]]~~ 210. This provides the user more room to maneuver the key 200.
